

VulnGuard - Security Assessment Report

Target: LOCAL (http://localhost:3000)
Execution Date: 2026-08-18 15:51:13 | Score: 71.0/100

Executive Summary

This automated assessment evaluated http://localhost:3000 within an authorized laboratory scope. A total of 4 findings were identified across headers, cookies, ports, and baseline configurations.

Vulnerability Register

ID	Severity	Finding Title	Category
PORT-3306	Medium	Open Port Detected: 3306 (MySQL)	Network Exposure
PORT-5432	Medium	Open Port Detected: 5432 (PostgreSQL)	Network Exposure
CONN-ERR	Informational	HTTP Connection Inactive or Blocked	Availability
TLS-NO-HTTPS	High	Cleartext HTTP Protocol in Use	Cryptographic Failures

Remediation Details

Open Port Detected: 3306 (MySQL) [Medium]

Evidence: Port 3306/TCP accepted handshake on localhost
Impact: Exposed service attack surface if unauthenticated or misconfigured.
Remediation: Close unused ports and apply strict local firewall rules.

Open Port Detected: 5432 (PostgreSQL) [Medium]

Evidence: Port 5432/TCP accepted handshake on localhost
Impact: Exposed service attack surface if unauthenticated or misconfigured.
Remediation: Close unused ports and apply strict local firewall rules.

HTTP Connection Inactive or Blocked [Informational]

Evidence: HTTPConnectionPool(host='localhost', port=3000): Max retries exceeded with url: / (Caused by NewConnectionError(': Failed to establish a new connection: [WinError 10061] No connection could be made because the target machine actively refused it'))
Impact: Web analysis routines were bypassed.
Remediation: Ensure target laboratory service is listening.

Cleartext HTTP Protocol in Use [High]

Evidence: Target endpoint is served via http://localhost:3000
Impact: Exposure of credentials, parameters, and sensitive application payloads.
Remediation: Configure a TLS certificate and enforce HTTPS redirects.
